

When you choose a power supplier, that supplier is responsible for generating and/or purchasing power that is added to the power grid in an amount equivalent to your electricity use. Electricity customers served by Source Power & Gas LLC are supplied by residual power purchased from the PJM Interconnection (PJM), the local regional transmission organization. Source Power & Gas LLC does not provide power from any particular generating facilities; rather, the PJM residual power purchased by Source Power & Gas LLC consists of electricity from a variety of power plants that the PJM then transmits throughout the region as needed to meet the requirements of all customers in the PJM territory (including Pennsylvania, New Jersey, Maryland, and Washington, DC).

Source Power & Gas LLC will report fuel sources and emissions data from PJM to its customers twice annually, allowing customers to compare data among the companies providing electricity service in Maryland.

The source of this information is PJM-GATS (<https://gats.pjm-eis.com/gats2/PublicReports/PJMResidualMix/Filter>) for 2013.

<b>Energy Source (Fuel Mix)</b>	<b><u>PJM Residual Mix - Year: 2013</u></b>	<b><u>Fuel %</u></b>
	Nuclear	38.3%
	Coal	40.0%
	Gas	17.4%
	Import Mix	4.0%
	Oil	0.2%
	Hydro	0.1%
	Total Renewables	0.0%
	Solar	0.0%
	Total	<u>100.0%</u>

<b>Air Emissions</b>	<b><u>Emission Type</u></b>	<b><u>Lbs. per MWH</u></b>
	Nitrogen Oxides (NO <sub>x</sub> )	0.9032
	Sulfur Dioxide (SO <sub>2</sub> )	2.3252
	Carbon Dioxide (CO <sub>2</sub> )	1059.6761

CO<sub>2</sub> is a "greenhouse gas," which may contribute to global climate change. SO<sub>2</sub> and NO<sub>x</sub> released into the atmosphere react to form acid rain. NO<sub>x</sub> also react to form ground level ozone, an unhealthful component of "smog."
