

Electricity can be generated in a number of ways with different impacts on the environment. The standardized environmental information shown below allows you to compare this electricity product with electricity products offered by other electric suppliers. The data shown below are default values and do not necessarily reflect the energy that Source Power & Gas LLC will supply.

Energy Source (Fuel Mix)	PJM System Mix	Fuel %
	Source Power & Gas LLC relied on these energy resources to provide the electricity product.	
Coal		34.71%
Gas		26.07%
Hydro		1.01%
Nuclear		34.38%
Oil		0.19%
Renewable Energy Sources:		
Biomass		0.00%
Captured Methane		0.31%
Fuel Cell		0.03%
Solar		0.15%
Solid Waste		0.49%
Wind		2.43%
Wood		0.23%
<b>Total</b>		<b>100.00%</b>
Renewable Energy Sources Subtotal		3.64%

Air Emissions	Emission Type	NJ Benchmark
	Carbon Dioxide (CO <sub>2</sub> )	90.0%
Nitrogen Oxides (NO <sub>x</sub> )	32.0%	32.0%
Sulfur Dioxide (SO <sub>2</sub> )	96.0%	96.0%

The emission data given are default values and represent the average amount of air pollution associated with the generation of electricity in the region. This amount is compared to the New Jersey benchmark. The benchmark approximates the average emission rate for all electricity generation in New Jersey.

CO<sub>2</sub> is a "greenhouse gas," which may contribute to global climate change. SO<sub>2</sub> and NO<sub>x</sub> released into the atmosphere react to form acid rain. NO<sub>x</sub> also react to form ground level ozone, an unhealthy component of "smog."

Energy Conservation	Source Power & Gas LLC is not investing in energy conservation measures for this electricity product. Energy conservation measures means less electricity needs to be generated and pollution is avoided.	Avoided Generation	Avoided Air Emissions
			0 kWh
